FRONTEND

Angular · TypeScript · RxJS · NgRx ·
MicroFrontend Architecture · REST
Integration · Responsive UI

BACKEND & ARCHITECTURE

Go (Golang) · Python (Django) ·
Microservices · Event-Driven Design ·
Config-Driven Architecture · API Design ·
REST/SOA Services

CLOUD & DEVOPS

Docker · Kubernetes · CI/CD Pipelines ·
Jenkins · Git · Cloud-Native Delivery

DATA & STORAGE

PostgreSQL · Redis · NoSQL/RDBMS
Concepts · Kafka

EDUCATION

B.Tech — Computer Science

VNR Vignana Jyothi Institute of
Engineering and Technology

2024 · GPA 9.08/10

CERTIFICATIONS

Golang Software Engineer (Verified) —
HackerRank, Apr 2026

REST API Integration Specialist —
HackerRank, Apr 2026

SQL (Advanced) Database Architecture —
HackerRank, Apr 2026

PROFESSIONAL SUMMARY

Full-stack Software Engineer with 3 years of experience building both the Angular frontend and Go-based backend microservices for a production fintech platform. Experienced across the full delivery lifecycle: micro-frontend architecture, config-driven multi-entity backend services, core-banking connectivity, and cloud-native deployment on Docker and Kubernetes. Comfortable owning a feature end-to-end, from UI component through REST API to containerized service, within fast-paced Agile teams.

CORE COMPETENCIES

- Full-Stack Delivery: Angular/TypeScript frontends integrated with Go REST backends, sharing a single delivery pipeline.
- Microservices & Architecture: Config-driven, multi-entity microservices; event-driven and rule-engine-based routing patterns.
- Cloud & DevOps: Containerized services with Docker, deployed and orchestrated on Kubernetes; CI/CD pipelines with Jenkins and Git.
- Data Layer: RESTful API design, PostgreSQL and Redis-backed services, groundwork in NoSQL data modeling.

PROFESSIONAL EXPERIENCE

Software Development Engineer — Full Stack (Angular / Go) Jan 2024 — Present
IMPAR Fintech Software Solutions India Private Limited · Hyderabad, IN

- Engineered a scalable Micro-Frontend (MFE) banking architecture in Angular, orchestrating a host shell to embed modular child apps and enabling independent, parallel deployments across product teams.
- Built and maintained a shared UI component library published to a private NPM registry, standardizing design tokens and reusable components across squads.
- Engineered highly available REST-based publish services in Go managing complex 12-scheme workflows across 3 client-specific configurations, sustaining over 10,000 transactions per minute at 99.9% uptime.
- Built critical connectivity services for Mambu core-banking integration, delivering reusable modules that cut partner integration time by 30%.
- Integrated Keycloak authentication end-to-end, architecting a dynamic menu system on the frontend driven by role-based permissions enforced in the backend.
- Authored reusable Go libraries and internal tooling, and partnered with QA/DevOps to embed CI/CD practices, together improving development velocity by 20%.

Associate Software Developer Jul 2023 — Dec 2023
IMPAR Fintech Software Solutions India Private Limited · Hyderabad, IN

- Built a full-stack self-service portal, pairing an Angular frontend with a Django/Python backend, cutting data retrieval time by 40%.
- Designed relational data models and REST endpoints powering personalized dashboards, contributing to a 15% uplift in feature adoption.

PROJECT

Real-Time Transaction Ledger & Rule Engine — Personal Project
Go · REST APIs · PostgreSQL · Redis · Docker · Kafka · gRPC

- Architected a high-throughput transaction processing service in Go with a pluggable rule engine to route transactions across configurable client schemes.
- Implemented an event-driven pipeline with Kafka for asynchronous ingestion and Redis for idempotency and rate-limiting.
- Containerized all services with Docker; designed normalized PostgreSQL schemas with connection pooling and structured logging for observability.
